1 TODO Finish Project [66%]

1.1 DONE create google form for member strengths

1.2 DONE Write Requirements

- Input
 - Multiple Types
 - * User inputs two names (wikipages)
 - * ~ user inputs one name (wiki page)
- Processing
 - Convert string to related node id
 - Find the paths such that all possible paths are $\leq |\text{path}|$
- Interaction
 1. Take user input
 2. Say if we found a link or not
 - If found a link keep going, else terminate
 3. Ask user for a guess about the path length
 - The number of guesses is yet to be decided
 - Allow user to skip guessing
 4. Show the output.
- Output
 1. The length

2. The actual path

- Should be sorted using lexicographical to sort the paths
 - * Least obvious
 - Least category change
- A module to wrap around the SQLite module provided by Java

3. Interface

- Responsible for input and output
- State of interaction process
 - * Input step, etc.

4. Traversal Module

- Responsible for finding the shortest path between two nodes

• ADT

- Path
 - * Stores the solutions sequences
- Node
 - * node number
 - * set of neighbouring nodes numbers, not ADT
